Terry:

We need to talk about the TCLP Analyses and how we make the determination that a material is not hazardous if the only reason it is hazardous is because the lab could not get down to the Regulatory Level due to matrix interferences. These compound are non-detect at those levels.

Do you have a RCRA person that can give us some guidance? Maybe the corrective action people can tell us if CES ever received waste with Chlorodane, Heptachlor, Heptachlor expoxide, 2,4-Dinitrotoluene, Hexachlorobenzene etc.

Thanks

Gary Moore
